A Club Entry System To Fit Your Club

WELCOME

Our work with thousands of clubs has taught us one key thing: no club is the same when it comes to their security.

That's why we offer one of the widest ranges of access control so that every single gym gets an entry system that works for them.

We have full height entry control systems that provide round the clock security, speedlanes to simply control traffic to your club floor and a huge range of access options so your members can enter your facility with everything from a membership card to their own fingerprint.

Every single one of our entry systems is fitted by our in-house team and integrates with our Ashbourne software ecosystem, to give you instant updates to your membership database. We can design and tailor a package to your exact requirements as well as providing ongoing support and maintenance.

From tripod turnstiles to swing gates; biometric scanners to membership cards, we are confident that we have an entry system that will work perfectly for you and your members.

TABLE OF CONTENTS

02 - 03

Welcome

Discover our turnstile and entry systems that we can tailor to your club.

04 - 05

Tripod Turnstiles

Tripod Turnstiles

Our range of tripod turnstiles are designed to be space-saving, reliable and a low cost solution for controlling access to gyms and health clubs.

They are easy to install and service, which is why they are the most popular type of security turnstile for many of our facilities.

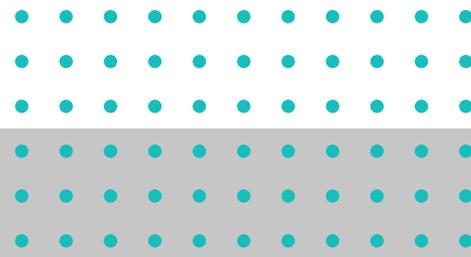

Benefits of Tripod Turnstiles

A tripod turnstile is a perfect fit when space is limited. Its design provides a visible barrier of three stainless steel bars located at an angle of 120 ° which rotate on an inclined axis.

Access is then controlled by a variety of options including biometrics, card readers, barcodes or QR scanners as well as manually via your control pad.

In the event of an emergency the panic mode drops the bars, allowing unhindered free access in both directions.

Ashbourne offers a choice of 2 tripod turnstiles: a basic and premium option. Both models work seamlessly with the rest of the Ashbourne club management ecosystem, differing only in style and features.

Basic Tripod Turnstile

The Centurion-M Basic Tripod Turnstile is designed to take up minimum space and give maximum efficiency.

The fast responding motor and quick operation will eliminate crowding at your club's entrance.

Advantages:

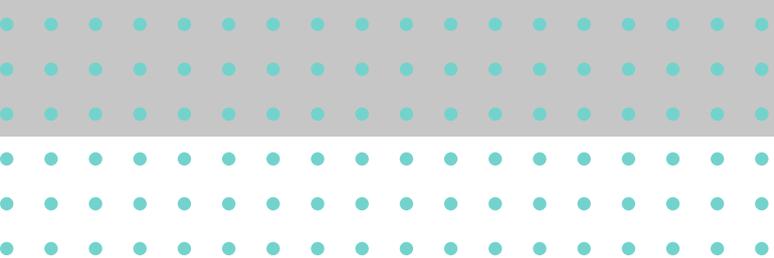

- Bi-directional motorized tripod
- Panic/Bar drop function with auto reset
- Integrates with any type of access control
 - Whisper quiet, low noise operation
- Compact design that works with any space

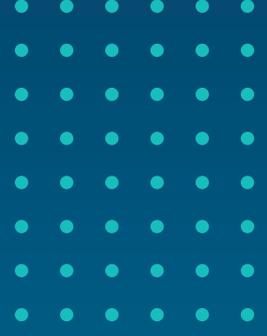

Premium Tripod Turnstile

The Galaxy-M Premium Tripod combines the functional tripod with stylish framed glass. With LED indicators, display and an integrated card reader, its contemporary design makes a stylish addition to any club.

Advantages:

- Bi-directional motorized tripod
- Panic/Bar drop function with auto reset
- Integrates with any type of access control
- Whisper quiet, low noise operation
- Sleek & stylish design that compliments your club

Full Height Turnstiles

Full Height Turnstiles are the ideal solution for unmanned facilities. These turnstiles offer the highest security/vandal proof requirements and are the perfect solution to a gym looking to go 24/7 with minimal on-site staffing.

Benefits of Full Height Turnstiles

Acting as a visual deterrent, full height turnstiles are a low maintenance solution for controlling access to your club as well as preventing tailgating and any unauthorised entries.

Our range of turnstiles includes both single and space saving double lane modifications, providing your members with wheelchair access.

Our full height turnstiles integrate seamlessly with the entire Ashbourne ecosystem as well as working with all the access control systems we offer, so you can secure your gym with everything from pin codes to fingerprints.

Basic Full Height Turnstile

The Sesame Basic Full Height Turnstile is perfect for unmanned facilities. As a one lane type of turnstile gate, it ensures vandal proof security. Strength and durability is granted by a robust, fully welded design.

Advantages:

- Bi-directional turnstile
- Indoor / outdoor use
- Allows unmanned 24 hour gym access
- Available in a range of RAL colours
- Secure, cost effective and reliable
- Installed by the Ashbourne team

Premium Full Height Turnstile

The GLASSGO is the perfect premium option for unmanned facilities. The operating principal here is similar to a full height glass turnstile with the main difference being the glass blades and stainless steel canopy, providing a more aesthetically pleasing solution for security access.

Advantages:

- Bi-directional turnstile
- Indoor application only
- Allows unmanned 24 hour gym access
- Sleek & stylish design that compliments your club
 - Secure, cost effective and reliable
 - Installed by the Ashbourne Team

Motorised Swing Gates

Automatic swing gates can be controlled through a variety of access control and ID solutions, including biometrics, card readers, barcodes or QR scanners as well as manually controlled via a control pad.

Ideal for enabling the access of wheelchair users or people entering with oversized belongings, swing gates can be used in conjunction with tripod turnstiles as well as on their own.

The Gate-GS Slim offers single or dual director control of member access. The swing turnstile has an ultra thin tube equipped with light indication that glow depending on the passage mode.

Advantages:

- Bi-directional
- Works with our turnstile range to control flow of traffic
- Integrates with any type of access control
- Provides disabled access
- Whisper quiet, low noise operation
- Installed by the Ashbourne team

Premium Speed Lanes

Speed gates offer an elegant and stylish security solution. The gates can be programmed to automatically open to those who have the valid entry requirements, such as ID cards and biometrics, decreasing the chance of non-members gaining access.

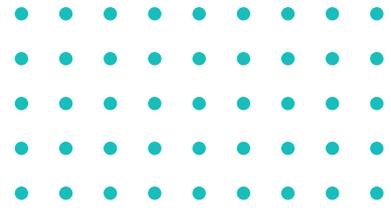

With a fast entry per minute rate, speed lanes are becoming a favourite amongst facilities and are perfect for managing crowds.

The Sweeper speed lane is a perfect choice for facilities where sophisticated design is key. The speed lanes can be controlled using a push button or interfaced with a variety of access control systems and provides an anti-tailgating function.

Advantages:

- Solution for disabled access
- Perfect for high traffic areas
- Equipped with sensor that detects tailgating
 - Customised surface finish and top lid
 - Sleek & stylish design
- Installed by the Ashbourne team

Magnetic Locks

Magnetic locks provide maximum security for your facility with the added benefit of working with any access control system. Our maglocks integrate

with our entire software ecosystem so you can be assured that only your members are accessing your club, even outside of desk hours.

Easy to install and incredibly durable, mag locks are expected to last the lifetime of the door and well beyond. They can be connected to any of the access controls we provide, so your mag lock is both secure and convenient for your members. As the lock is powered by electricity, the door is unlocked immediately when the power is cut or when the

manual switch is activated, making it the safest option during an emergency exit in the event of a fire or if someone requires immediate access to your facility. You can also connect your maglock with a backup battery, to ensure your facility remains secure even during a power outage.

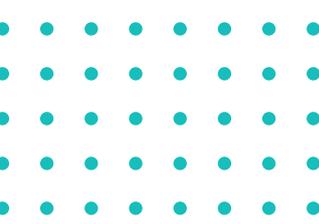

Ashbourne's electromagnetic door locking system can be fitted to existing doors and gates to offer a reliable and cost-effective security option. Suitable for single and double doors, as well as doors that swing inwards or outwards, they can be easily tailored to your facility.

Over time, using a maglock system will provide you with long term cost savings. As with all facilities, members come and go, as do employees, so why worry about getting keys back or even worse, having the expense of changing locks, when you can simply remove access with a few keystrokes.

Access control systems are much less expensive to update, costing you and your staff only a small amount of time. All your member cards and fobs can be re-magnetised repeatedly as your access codes change.

Advantages:

- Entry control linked to Ashbourne's software
- Activated by fingerprint, card, pin code or RFID
- LED indicator to identify if door is locked
- Fitted with battery backup
- Can be easily turned off to use as a normal door

Barcode/QR Scanners

Using barcodes or QR codes for members to access your club is a perfect cost-effective solution for your facility. Your members can generate QR codes or barcodes through your Ashbourne powered gym app: YourApp+, your bespoke app and/or customised key fobs to scan at reception when they enter your facility. Using barcodes or QR codes have many benefits, such as:

1. Quick and error-free

It is virtually impossible for there to be any errors when using barcodes or QR codes. Staff and members are likely to make errors when typing, so using automatically generated codes is a much faster, error-free, and convenient way to access your club.

2. Convenient

QR codes and barcodes are generated via our customisable app on your member's mobile phone, eliminating the need to remember additional items when visiting your club, such as key fobs or membership cards.

The Ashbourne barcode/QR scanner can be easily placed in your club's reception so your members are able to automatically scan as soon as they enter your facility and it will confirm whether the code scanned has access rights – perfect for controlling access during peak and off-peak hours.

Advantages:

- Quick and easy contactless access
- Immediate access code generation
- Flexible, temporary access permissions
- Cost effective
- Reduced carbon footprint
- Integrates with YourApp+

Biometric Scanners

Fingerprint scanners provide your club with the most secure level of access control and prevents your members from being able to share their access (e.g., membership cards and fobs). Our biometric scanners convert fingerprint images to a unique code for each of your members and can be used in conjunction with a keypad as a backup option for those who do not want to give fingerprints.

Biometric access is so streamlined and simple, that it has the most advantages over any alternative access control method.

Advantages:

- Quick and easy contactless access
 - Internal use only
 - Ensures proper identification as details cannot be transferred
- Provides a clear audit trail and is very accurate when identifying users
 - Very user friendly, with no passwords to remember
- Gives increased security to your facility and is easily scalable to meet the ever-changing needs of your facility

RFID Cards, Key Fobs & Stickers

With customised cards, key fobs, and stickers, which can be easily attached to mobile phones and wallets; Your members will have quick and easy contactless access every time they visit your gym. They can also be used in conjunction with a keypad for those who forget their cards/fobs.

Advantages:

- Quick and easy contactless access
 - Internal and external use
- Can be personalised with your club's logo, colours and own wording

Magnetic Swipe Card

Possibly the easiest entry solution to consider for your club and very cost effective. We can create cards or half sized fobs which are completely tailored to your branding that your members simply need to swipe upon entry to your facility. The magnetic swipe card reader can be used in conjunction with a keypad.

Advantages:

- Quick and easy access
- Internal and external use
- Can be customised with your logo, colours and own wording

Membership Cards

Membership cards are the most cost-effective method of access control. Working in conjunction with the entry system of your choice, membership cards act as a key and grant/restrict access as

required. Typically, the same size as a debit card, there are several varieties of access cards that Ashbourne offer, including magnetic-stripe cards and RFID cards.

Benefits of Membership Cards

Beyond simply granting members access to your club, membership cards can also store personal data relating to the card holder, record clocking in/out information and can be activated and deactivated at a moment's notice via your access control benefits.

This information will be updated to your Ashbourne system and allow you to see which members are getting the most from your club, and which members need additional customer care to ensure that they

are getting the most value from their membership.

If a card is lost or stolen, you can quickly deactivate the card. You can then have peace of mind, that if the card is picked up by an unauthorised person, they will not be able to gain access.

Cards can also be programmed to limit access to certain areas at certain times. Perfect for peak and off-peak memberships.

We're Ready To Help You Build Your Perfect Club!
